PROFESSIONAL SUMMARY

Analytically driven Data Analyst with an M.Sc. in Statistics and a strong foundation in SQL, Power BI, Tableau, R, and Python. Demonstrated track record of translating complex, large-scale datasets into clear business narratives and decision-ready dashboards — achieving 99% data accuracy across a national census operation. Author of published genomic research applying statistical modeling to multi-million-row datasets. NST Government Fellowship recipient. Combines academic rigor with commercial thinking to uncover the insights that move the needle on business performance.

TECHNICAL SKILLS

BI & Visualization	Power BI · Tableau · Excel (Advanced) · Google Data Studio
Data & Querying	SQL (PostgreSQL, MySQL) · Data Modeling · ETL · Data Validation & QA
Programming	R (Advanced — tidyverse, ggplot2, caret) · Python (Intermediate — Pandas, NumPy, Matplotlib) · SPSS
Statistical Methods	Multivariate Analysis · Hypothesis Testing · Regression · Time Series · GWAS / Meta-Analysis · Data Mining
Soft Skills	Stakeholder Communication · Report Writing · Research Design · Cross-functional Collaboration
Domain Knowledge	Business Intelligence · E-Commerce Analytics · Healthcare Analytics · Genomics / Bioinformatics

PROJECTS & PORTFOLIO

E-Commerce Business Intelligence Dashboard Link

Stack: SQL · Power BI · Tableau

- Engineered an end-to-end BI solution covering customer segmentation, revenue performance, and product analytics — replicating a real-world analyst workflow from raw data to executive dashboard.
- Designed interactive Power BI and Tableau dashboards with drill-through filters; surfaced monthly revenue trends, regional distribution heatmaps, and SKU-level product performance.
- Wrote advanced SQL queries to compute Customer Lifetime Value (CLV), segment buyers as new vs. repeat, and rank top products — converting transactional data into strategic business metrics.
- Identified regional market concentration gaps and seasonal purchase trends, producing a written insight report with actionable growth opportunity recommendations.

Superstore Sales Analytics — Profit Optimization Report Link

Stack: SQL · Excel · Tableau

- Diagnosed a $193K net loss in Furniture — the top revenue category at $2.66M — attributing losses to aggressive discounting through margin decomposition analysis.
- Quantified a hard breakeven point at 20% discount threshold via scatter regression analysis; recommended a single pricing policy change projected to recover $50K+ in annual profit.
- Benchmarked Technology (~4.6% margin) and Office Supplies (7.1% margin) against underperforming segments, producing a prioritized investment roadmap for category managers.
- Charted 4-year Q4 seasonality patterns, providing a data-backed calendar for inventory investment and campaign targeting — reducing forecast uncertainty for leadership.

Comparative Healthcare Study — Government vs. Private Hospital Quality Link

Stack: SPSS · Excel · Survey Research

- Designed a primary research framework and collected 200+ structured survey responses across public and private hospital facilities in Munshiganj district.
- Performed hypothesis testing, chi-square analysis, and multivariate statistical modeling using SPSS to assess quality-of-care differentials between institution types.
- Delivered findings as structured analytical report with visualizations and dashboards to academic panel; recommendations cited potential policy improvements for healthcare service delivery.

PROFESSIONAL EXPERIENCE

Statistical Data Analyst — Research

Feb 2023 – Present

Bioinformatics Lab, Dept. of Statistics, University of Rajshahi • Rajshahi, Bangladesh

- Spearheaded GWAS meta-analysis on multi-million-row genomic datasets to identify breast cancer-associated SNPs — applying advanced statistical modeling, hypothesis testing, and pattern recognition at scale.
- Architected R-based ETL pipelines for data ingestion, cleaning, merging, and validation across heterogeneous biological datasets; maintained 100% reproducibility across all analytical workflows.
- Deployed multivariate analysis and data mining methods to extract meaningful biological signal from high-dimensional genomic data; translated findings into structured reports for medical and academic stakeholders.
- Leveraged bioinformatics toolchain (METAL, dbSNP, Ensembl VEP) with R for variant annotation, quality control, and exploratory analysis — establishing a scalable pipeline reused across 3 research tracks.
- Co-authored a research manuscript currently under peer review in an international journal — demonstrating ability to communicate complex statistical findings to a broad scientific audience.

Data Collection & Quality Analyst (Contract)

Mar 2022 – Apr 2022

Bangladesh Bureau of Statistics (BBS) • Munshiganj, Dhaka

- Collected, entered, and validated data from 75+ households daily using SurveyCTO and Excel — achieving 99% data accuracy across a 3-week national census operation (Population & Housing Census 2022).
- Executed real-time data reconciliation and multi-point quality checks across concurrent data streams, identifying and correcting inconsistencies before submission to central BBS servers.
- Collaborated with field supervisors and quality leads to resolve data discrepancies rapidly, ensuring 100% on-time submission and full compliance with national BBS data governance standards.

EDUCATION

M.Sc. in Statistics — Thesis Track 2025

University of Rajshahi • Rajshahi, Bangladesh

- Thesis: GWAS Meta-Analysis to Disclose Breast Cancer-Causing SNPs for Diagnosis, Prognosis, and Therapies
- Specialization: Large-scale data analysis · Statistical modeling · Bioinformatics · Research methodology

B.Sc. in Statistics 2024

University of Rajshahi • Rajshahi, Bangladesh

- Core Coursework: Probability & Statistical Inference · Regression Analysis · Multivariate Statistics · Data Mining · Research Methods · Linear Algebra

PUBLICATIONS & RECOGNITION

- Publication (Under Peer Review) — "GWAS Meta-Analysis to Disclose Breast Cancer-Causing SNPs for Diagnosis, Prognosis, and Therapies": International journal submission demonstrating mastery of large-scale dataset analysis and real-world research impact.
- NST Fellowship — National Science and Technology Fellowship, Ministry of Science and Technology, Bangladesh: Awarded for outstanding achievement in statistical research; highly competitive national recognition.
- International Conference Certificate of Participation — Dept. of Statistics, University of Rajshahi (2020–2024): Consistent presence in the academic data community across four consecutive years.

LEADERSHIP & INVOLVEMENT

- President, Munshiganj-Bikrompur Students' Association, University of Rajshahi (Feb 2023 – Dec 2025) — directed a 100+ member organization; led strategic planning, event management, and cross-functional coordination of community initiatives.
- Executive Member, Rajshahi University Model United Nations — RUMUNA (2020–2021) — applied negotiation, persuasive communication, and stakeholder management in national-level diplomatic simulation events.
